

Browse catalog

You can browse the catalog articles and styles, and group them according to your preference. Catalog articles can either be viewed in a tree structure or within saved views. Multiple catalog trees can be defined in T1 for the catalog and you can select the tree you want. The below example shows the views as the default tab:

Views are divided into two sections, My views which are the views you add based on your preference, and the predefined views added by you or other users as catalog wide ones. Views are mentioned in details in [“Saved views”](#).

Go to the **Tree** tab, tree nodes are displayed as shown in the below example:

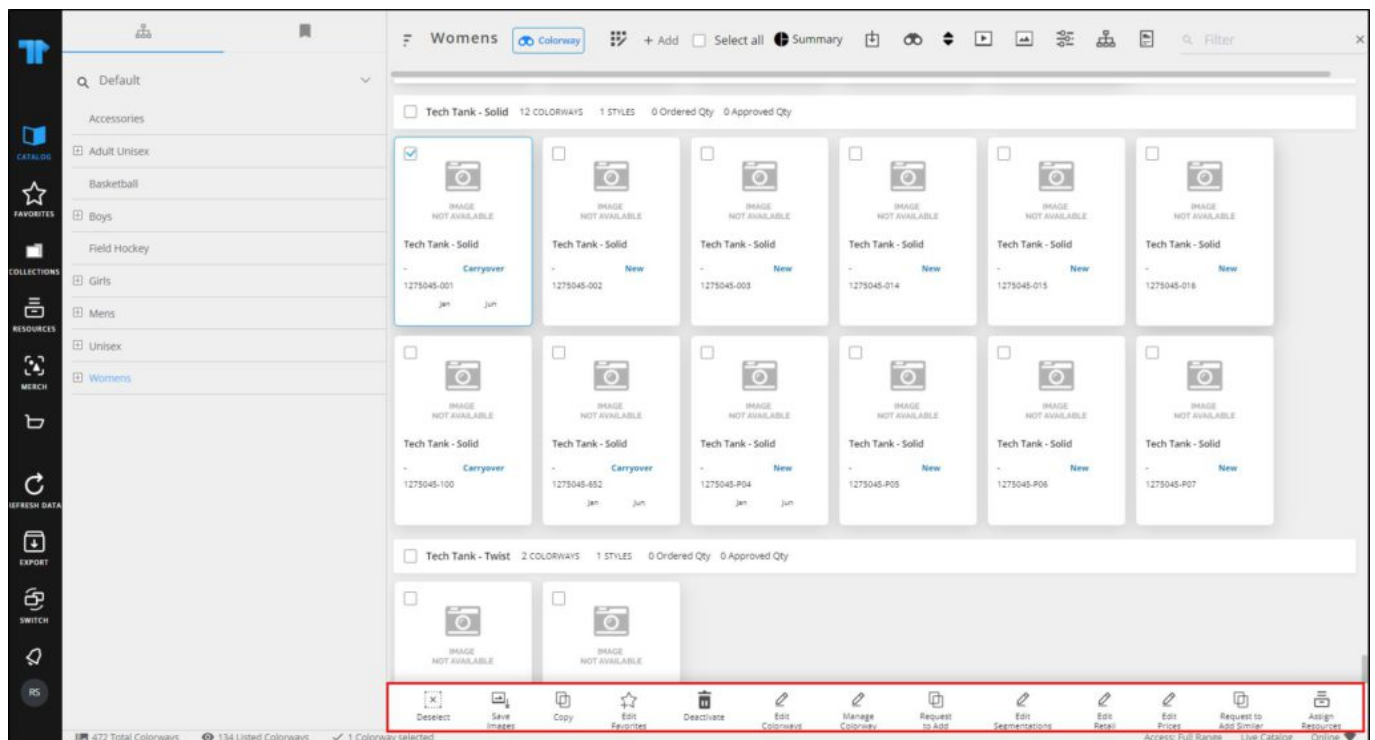

You can select the tree you want from the menu, and search for a specific category by clicking  then typing the category you want, articles are filtered accordingly. To hide the catalog tree, click .

To open a node, click it or click the **+** sign next to it, or click the open node to close it. Click the node you want to view its articles as shown in the below example:

Article thumbnails are displayed, along with the configured information, such as the article number, name, price, and status, etc. You can select the article you want by clicking its checkbox or press Ctrl + A to select all the articles. A number of options appear at the bottom of the window to enable you to perform certain actions as shown in the below example:

Notes:

- You can right-click any of the articles to get the following options:

This menu provides shortcuts to different functions that you can perform on the catalog articles. You can view the article details by clicking **Show Details**, select and deselect an article, or select all articles, save images, and copy the article number.

- If images are not available for any of the articles, a placeholder image can be assigned to the article. You can also change the color of the placeholder image as shown in the below example:

The “Print” watermark can be added to the article thumbnail if you want.

- If the retail intro month and retail exit month is configured to be displayed on the thumbnail, the first 3 characters are displayed as shown in the below example:

- While browsing articles, keyboard shortcuts are also available as follows:
 - Ctrl + A to select all articles
 - F3 to add the selected articles to the default favorites tag
 - Ctrl + F to find an article, the following window appears:

You can enter a minimum of four characters then press **Enter** to start the search. A count of matching articles is displayed, and the text is highlighted on the thumbnail. You can move to

the next or previous matching articles by clicking (>) and (<).

- For stock catalogs, the catalog can be configured to display only articles with available stock values.
