

Color palette

This tab allows you to manage color palettes and add criteria based on which the palette will be assigned to articles. The tab appears as shown in the below example:

Id	Name	Code	Color Criteria	Status	Updated By	Actions
9,993	Palette01	001	{'Gender': 'Unisex', 'EndUse': 'tr'}	Active	@trasix.com	

A palette can have specific criteria based on which it will be assigned to articles, while palettes without criteria are assigned to all articles. When an article is added or updated, the list of colors available are displayed based on the applied criteria. Users can also import multiple palettes into T1. The following sections discuss how to add, update, delete, and import color palettes.
