

Relation types

Through this tab, you can define relation types between articles for master catalogs, and they can also be viewed in child catalogs. Relations between catalog articles can also be viewed in the article details in both T1 and T1 Studio. Go to **Relation types**, the following window appears:

< Guest Reasons Bucket Attributes Restrict Bucket Attributes Linked Catalogs Color Palette Color Definition Relation Types >						
<div><input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> 0 of 1 Selected</div>						
Id ↕	Name ↕	Reversed Name ↕	Status ↕	Updated By ↕	Updated Date ▼	Actions
<input type="checkbox"/> 3	Inclusive A	Inclusive B	● Active	@trasix.cor	📅 Jul 1, 2022	⋮

The list of relations are listed , for each one, the name, reversed name, status, the user who updated the record and the update date are displayed. You can add a new type, update any of the existing relations, and delete them as mentioned in the coming sections.
