

Relation types

Through this tab, you can define relation types between articles for master catalogs, and they can also be viewed in child catalogs. Relations between catalog articles can also be viewed in the article details in both T1 and T1 Studio. Go to **Relation types**, the following window appears:

Id	Name	Reversed Name	Status	Updated By	Updated Date	Actions
3	Inclusive A	Inclusive B	Active	@trasix.cor	Jul 1, 2022	

The list of relations are listed , for each one, the name, reversed name, status, the user who updated the record and the update date are displayed. You can add a new type, update any of the existing relations, and delete them as mentioned in the coming sections.
