

## Segmentations

Through this page, you can define segmentations for a catalog in order to assign articles and customers to those segmentations. Customers can only see and order articles within the same segmentation to which they are assigned.

View the catalog you want then go to **Segmentations** tab, the following page appears:

The screenshot shows a web application interface for managing segmentations. At the top, there is a navigation bar with tabs: Catalog, Attributes, Configurations, Delivery Dates, Price Group, Segmentation Group, Segmentations (which is the active tab), Stock Definition, and Tree. Below the navigation bar, there is a toolbar with icons for selection, deletion, undo, redo, and a status indicator showing '0 of 2 Selected'. The main content area is a table with the following columns: Name, Description, Status, Updated Date, and Actions. The table contains two rows of data. The first row is for 'Segmentation-1' with a description of 'Segmentation-1', a status of 'Active' (indicated by a green dot), and an updated date of 'Sep 27, 2020'. The second row is for 'Segmentation-2' with a description of 'Segmentation-2', a status of 'Active' (indicated by a green dot), and an updated date of 'Sep 27, 2020'. A red circular button with a white plus sign is located in the bottom right corner of the table area.

Segmentations defined for this catalog are listed. For each one, the description, status, and updated date are displayed.

You can add a new segmentation, import a file with segmentations, update or delete any of the existing ones as discussed next.
