

# Consolidations

## Consolidations

After creating consolidation templates, you can use those templates to consolidate orders and create consolidation reports. A consolidation report contains the Excel sheet generated with the fields specified in the template. For more information on consolidation templates, please refer to "[Consolidation templates](#)".

To view consolidations of a specific catalog, select the catalog from the Active Catalog dropdown list then click **Consolidations** from the left side menu, the following page appears:

Name	Consolidation	File name	Template name	Status	Updated Date	Actions
Consolidation 3	NEW		Template 1	Active	Jan 14, 2018	
Consolidation 2	COMPLETE	2 - Template 1 - 01-14-2018	Template 1	Active	Jan 14, 2018	
Consolidation 1	COMPLETE WITH OUT DAT		Template 2	Active	Jan 11, 2018	

Consolidations created for the selected catalog are listed. For each one, the consolidation status, file name, template name, status, and update date are displayed.

When the consolidation is first created, its status is "New", then it moves to "In Progress" status. After some time and when the page is refreshed, the consolidation status changes to "Complete" and the file name appears which is the folder name in which the consolidation Excel file is stored. Also, the consolidation status could be "Complete without Data", in this case, the folder is not created and the consolidation does not return any records.

The following sections discuss how to add a consolidation, view consolidation details, download the consolidation file, and rerun a consolidation.
