

Forecasting

Forecasts are the predicted article quantities to be ordered in the future, and they can be defined for a specific customer or by the buyer himself. Through this module, you can create a forecast for a specific location and specify the quantities for each article. You can also import a file with article quantities, and you can either publish the forecast to allow sellers and buyers of the catalog to view it, or keep it private.

Go to **Forecasting**, the following window appears:

The screenshot shows the Forecasting module interface. On the left is a dark sidebar with a search bar and a list of menu items: CATALOG ORDERS (Allocation Groups, Customer Allocations, Buy Windows, Forecasting, Orders, Terms and Conditions, Order Adjustments, Consolidation Templates, Consolidations), and CONFIGURATION (Roles, Jobs). The 'Forecasting' menu item is highlighted in blue. The main area displays a table with the following data:

	Name	Customer Name	Location Name	Publish Status	Status	U Actions
<input type="checkbox"/>	SellerForecast-SEA-APAC	SEA	APAC	Published	Active	
<input type="checkbox"/>	SellerForecast-19077798-19077798	PYY Marine LLC	PYY Marine LLC	Draft	Active	

The page lists the forecasts of the selected catalog. For each one, the customer's name, location name, publish status, status and updated date are displayed.

You can import a list of forecasts, publish one or more forecasts or change it to draft state, among other actions as mentioned in the following sections.
