

Import lookup table values

You can import a file to map the source and destination attributes values for a specific lookup table. Source attributes should not be duplicated. To do so, follow these steps:

1. Click the **Import** button, the following window appears:

The screenshot shows a window titled "Import Data" with a blue header bar. Below the header is a progress bar with seven steps: 1. File (selected with a blue circle), 2. Sheet, 3. Mapping, 4. Filter (with a checkmark), 5. Validation, and 6. Information (with a checkmark). The main area of the window has two radio buttons: "Last Used File" (unselected) and "New File" (selected with a blue circle). Below these is a text field labeled "Filename:" containing the text "[none]". To the right of the text field is a button labeled "SELECT...". At the bottom of the window are two buttons: "BACK" and "NEXT".

2. Click **Select** to browse for the file you want to import,
3. Select the file then click **Open**, the name of the file you selected appears in its field, click **Next**, the following window appears:

Import Data

✓ File — ✓ Sheet — 3 Mapping — ✓ Filter — 5 Validation — ✓ Information

Please select the sheet that contains the data you wish to import

Values ▾

BACK NEXT

You can click **Back** to return to the previous window.

4. Select the sheet you want from the dropdown list in case your Excel file contains more than one sheet,
5. Click **Next**, the following window appears:
