

Targets

Through this module, targets for the coming season are created for styles of the selected catalog. These targets are created based on values for different attributes for a certain style in previous seasons that are used to calculate the margins of the coming season based on these values. Target reports can also be created for the catalog showing the total SKUs, units, revenue, and margin, etc.

Select the catalog you want then click **Targets** from the left menu, the following page appears:

The screenshot shows a web interface for managing targets. At the top, there are several icons (checkbox, refresh, trash, undo, redo) and a blue button that says "0 of 3 Selected". Below this is a table with four columns: "Targeted Attributes", "Status", "Updated Date", and "Actions". The table contains three rows of data, each with a checkbox, a string value in curly braces, a green dot followed by the word "Active", and a calendar icon followed by the date "Feb 14, 2023". A red circular button with a white plus sign is located in the bottom right corner of the interface.

Targeted Attributes	Status	Updated Date	Actions
<input type="checkbox"/> {"GHL:"2"}	● Active	📅 Feb 14, 2023	⋮
<input type="checkbox"/> {"GHL:"20";"GHS:"10"}	● Active	📅 Feb 14, 2023	⋮
<input type="checkbox"/> {"GHL:"2"}	● Active	📅 Feb 14, 2023	⋮

The page lists the targeted attributes defined for the catalog along with their values, status, and updated date.

The following sections discuss how to manage targets.
