

Segmentation

Segmentation is used in T1 as a way of classifying articles and grouping them. Customers are assigned to those segmentations to allow them to place orders for articles within the same segmentations.

Segmentation is defined per catalog and you can assign a segmentation to articles.

Go to **Segmentation** tab, the following page appears:

Article	Delivery Dates	Resources	Images	Sizes	Prices	Segmentation	History	Related
<input type="checkbox"/>				0 of 3 Selected				
Name ▾	Status ▾	Catalog Segmentation Status ▾	Updated Date ▾	Actions				
<input type="checkbox"/> Open	● Active	● Active	Jun 6, 2022					
<input type="checkbox"/> Segmentation-1	● Active	● Active	Oct 18, 2021					
<input type="checkbox"/> Segmentation-2	● Active	● Active	Jan 28, 2020					

The segmentations assigned to this article are listed. For each one, its status, catalog segmentation status, and creation date are displayed according to the columns you have chosen to show using the Column chooser. If all segmentations are assigned to the article, “Open” segmentation is automatically activated.

If the “Segmentation Mirroring” option is on for the child catalog, the article segmentation page appears as shown below:

Article	Delivery Dates	Resources	Images	Sizes	Prices	Segmentation	History	Related
<div> <input type="checkbox"/> <input type="checkbox"/> 0 of 3 Selected </div>								
Name	Status	Catalog Segmentation Status	Updated Date					
<input type="checkbox"/> Open	Inactive	Active	Jun 6, 2022					
<input type="checkbox"/> Segmentation-1	Active	Active	Jun 6, 2022					
<input type="checkbox"/> Segmentation-2	Active	Active	Jun 6, 2022					

You cannot manage the segmentations and buttons are not displayed.

Article segmentation can also be managed as mentioned in “[Article Segmentation](#)”.

You can assign a segmentation to an article or delete the segmentation as discussed next.
